

Ledger Unveils New Nano X Hardware Wallet at CES 2019

Cryptocurrency Security Leader Launches Bluetooth-Enabled Hardware Wallet along with the Ledger Live Mobile App;

Wins CES Innovation Award in Cyber Security and Personal Privacy

Las Vegas – January 7, 2019 – [Ledger](#), a global leader in security and infrastructure solutions for cryptocurrencies and blockchain applications, today unveiled the Ledger Nano X, a Bluetooth-enabled hardware wallet. As Ledger's new signature product, the Ledger Nano X improves on the Ledger Nano S, the world's most popular hardware wallet having sold over 1.5 million units, with enhanced state-of-the-art security and an improved user experience and design.

Ledger also launched the Ledger Live Mobile app, which allows Ledger Nano X users to manage secure transactions, install and uninstall apps, and check their real-time balances on the go. It will also enable Ledger Nano S users to check their balance in read-only mode. Ledger Live Mobile will be made available in the App Store and Google Play on January 28th.

The Ledger Nano X has a Bluetooth feature that easily and reliably connects through the Ledger Live Mobile app, which allows users to connect the device to their smartphone, providing increased mobility without sacrificing security. The Ledger Nano X can store up to 100 crypto assets, which is six times more capacity than the Ledger Nano S, and includes an improved interface with a larger screen.

The company also announced that the Ledger Nano X has been awarded the CES Innovation Award in Cyber Security and Personal Privacy for 2019. The CES Innovation Awards honor outstanding design and engineering in consumer technology products that protect and enhance digital security.

"The Ledger Nano X includes all of what you loved about your Nano S, but with new and improved major features," said Eric Larchevêque, CEO at Ledger. "With its Bluetooth connectivity and increased capacity, the Ledger Nano X provides an enhanced user experience while delivering the mobility and state-of-the-art security that customers expect from Ledger. It is exciting to be recognized by CES as the go-to leader for securing crypto assets."

The Ledger Nano X provides users with Ledger's cutting-edge security that isolates private keys from the owner's computer or smartphone, which are easily hackable, in order to protect their cryptocurrencies. Private keys represent ownership of the crypto assets, and by protecting them in a hardware wallet instead of on an exchange or in the cloud, users can rest assured that their assets are safe from attack. The Ledger Nano X leads the market in supporting over 1100 different cryptocurrencies, which enable users to check their accounts, as well as send and receive cryptocurrency payments from anywhere.

"As global data-ization continues to change people's lives, users are looking for trusted partners to protect their critical digital assets," said Pascal Gauthier, President of

Ledger. “At Ledger, we offer customers a way to secure these assets, through our state-of-the-art technology. With the Ledger Nano X, we are delivering increased security, along with improved access through the new Ledger Live mobile app.”
